N. P. Barton, C. S. Verma,* and L. S. D. Caves*: Inherent Flexibility of Calmodulin Domains: A Normal-Mode Analysis Study

Page 11036. The fifth sentence of the Abstract should read as follows: We see lower intrinsic flexibility of the C-domain compared with that of the N-domain.

The fourth sentence of the third paragraph of the Introduction should read as follows: Such flexibility is characteristic of signaling proteins that generally participate in high-affinity, low specificity interactions, in contrast to catalytic systems, which are more conserved and better ordered in crystal structures.⁸
